IAM Integration & Cloud Readiness
Services

## About us

Nowellgroup specializes in assisting small and large business on implementing cloud software solutions to improve their operations, reduce their risk posture and drive successful outcomes in various aspects of their operations from HR, to supply chain, customer service and maintenance while in production. By digitizing their standard operating procedures, companies that work with us have realized performance gains and cost savings. Applicable to healthcare, insurance, financial services, small and mid size businesses.

SailPoint provides comprehensive solutions in IAM that allows companies to meet complex IAM requirements around identity lifecycle management, RBAC and compliance access management, this approach requires mapping the use cases to the out of the box supported features and where necessary, tailoring/extending your solution using the SSB framework to meet your development, quality and integration customer-specific use cases. SailPoint provides IdentityIQ which is a software solution that includes a software development integration framework allowing you to integrate the IAM solution with your infrastructure environment. Further SailPoint offers IdentityNow, a fully managed services cloud SaaS offering enabling customers to quickly install and use their IAM services with less technical complexity. For ease of installation and faster deployment, the SaaS offering might be suitable, hiding away the technical complexities, however complex customer requirements and evolving integration needs that call for extensive customizations might be best served with the IdentityIQ solution. In some cases, a blend of both capabilities and deployment models might enable customers to take advantage of the innovations, while maintaining their competitive edge in being able to extend and customize the IAM software solution to derive better value for their customer-specific use cases

"A partner you can trust"

Our commitment

We are committed to your success from start to finish, operating with the highest standards of integrity and professionalism

SailPoint Integration Services – IAM Adoption Acceleration / SSO SAML RBAC automation

SailPoint software helps people gain the access they need to do their jobs more successfully and efficiently. SailPoint helps the human resources on-boarding team identify what type of access each new hire needs in the organization, and what they should get for cloud and on-premise enterprise applications, email services, assets, and company data resources. This process is called identity lifecycle management or identity and access management

SailPoint provides a comprehensive application server and user interface software framework for setting up a way for teams to identify what kind of access they need and a way to request and provision the access in a seamless, easy way. SailPoint can help organizations automate the joiner business process to automatically figure out and provision what access should be granted to employees when they join the team.

In addition, when team members move within the organization or take on new project assignments, SailPoint can automatically figure out what kind of access they need for their new roles and grant them the approved authorized access. SailPoint does very well with the joiner, mover (transfer) and leaver business processes.

In addition to these processes, the software allows managers to review who has access to

what company resources to meet requirements and regulations. This process is called access review or access certification and SailPoint allows teams to routinely review access to assure that teams have the right access to be productive and effective from day one. Further organizations looking to adopt Single-Sign-On capabilities via identity services SAML providers, can streamline this process by implementing SailPoint roles based access control to grant web applications access based on IT roles linked to Active Directory / LDAP groups

Contact us if you need good advise, unbiased experience and assistance with integration of your new SailPoint solution. We and our joint partners have the needed experience in J2EE integration, roles-based access controls, access consent and approvals, consulting delivery, and technical skills to successfully deliver your solution on time and on-budget

Integration Services
- *AWS Hosted SailPoint IdentityIQ Cloud Solution or IdentityNow (based on customers preferences)*
- *Tools for mapping complex customer-specific integration use cases to product out of the box features, with minimal customization only where necessary*
- *BPM SaaS tools for gathering input data for SailPoint application onboarding, roles based configuration onboarding for multiple global enterprise application owners and process management for assimilating all the required details for provisioning, certifications and ongoing maintenance using our **VerityBeyond GRC solution***

- *Automated joiner provisioning workflows to source, certify and provision application access to on-premise apps, Microsoft Active Directory, Office 365, zOs Mainframe RACF & CICS, Oracle HCM, PeopleSoft, JDBC, SAP & other cloud business applications like Salesforce, ServiceNow, Workday, etc.*
- *Automated mover / transfer to provision changes in employee job functions*
- *Complex approval processes, & approval authorization based on complex logic; implementing customer approvals for sensitive transaction; Weaving tighter integration with database driven enterprise applications*
- *Customization of OOTB provisioning workflows such as manage user access, simple user friendly fast form-based access request on desktop, web and mobile devices*
- *SAML IDP integrations and federation based on RBAC, webservice integration with ticketing solutions such as ServiceNow*
- *Roles based access setup, and access request for nested entitlement access and risk based approvals*
- *J2EE Java integration layer, Standard Services Deployment/Build Setup/migration/maintenance and full QA support, Azure Devops continuous integration, bug tracking and defect resolution*
- *Migration of previous access provisioning manual processes to SailPoint standard IAM services and continuous support*

- *SaaS based IdentityNow managed cloud feature evaluation, and requirements assessment for customer needs and expectations. IdentityNow SaaS solution very similar to IIQ, has a simpler configuration setup, easier to setup, provided customers can work within the vendors limitations including: outsourcing technical prioritization, development schedule, licensing terms and conditions, including performance management, costs with standing up multi- environment build outs, and disaster recovery requirements etc. The choice of implementation model, depends on the customers needs, and their ability to adopt a cloud managed solution, or to manage the software themselves in their own cloud infrastructure. Both are equally valid and we are pleased that SailPoint gives customers various options to pick and choose what works best for them. In the same way SailPoint gives customers the options to select various database types , application connectors, and operating system types and configurations to meet the wide variety of use cases of various customers. For this reason SailPoint remains our top pick for anything related to IAM provisioning, IAM compliance certifications and roles based access control*

"Therefore, if anyone is in Christ, he is a new creation. The old has passed away; behold, the new has come." 2 Cor 5:17

We are committed to your success, we will bring all our experience to your team to drive a win-win

Summary

Our goal is your success. With a track record of go-live experience, project deliveries and success, today, we develop BPM life-cycle software solutions to manage complex business, meet regulatory requirements such as (COBIT, HIPAA, PCI, SOX, OSHA) and streamlining teams looking to optimize business process efficiency in their supply chain. We also offer technical consulting services and fully packaged cloud software

Business process management software
Using our software platform called Verity BPM to define your key sops, manage service delivery and operations service management linked to financials

Supply chain software
Verity BPM has supply chain, inventory management, customer experience and service management features

ITSM integrations, cloud identity and access management
We have experience with SailPoint identity access management software as well as integration expertise with ServiceNow
