Why unified supply chain risk management?

- Supply chains enable us to create and transfer value to end customers
- Efficient supply chains, can save costs and capital waste
- Risk management means reducing avoidable incidents due to proper routine maintenance, inspections
- Avoid downtime, non-productive time, accidents and operational incidents and enable better customer service
- Complex supply chains, can be difficult to manage and maintain and we recommend the adoption of digital software solutions to help manage these components reducing the chances of error, in service failure
- Boost customer experience, build confidence from DAY ONE
- Optimize inventory, logistics and maintenance to support highest levels of customer service
- Bring the experience, wisdom and expertise of the whole team to collaborate to manage issues more effectively. Enable teamwork and distributed collaboration
- “Prevention is better than cure”
- Meet ISO quality standards and OSHA compliance requirements, for better risk mitigation

Verity

Unified supply chain risk management software

- *We need to assure top performance and sustainability of all linked supply chain elements*
- *We need team centric way to tier inspections and run routine maintenance checkpoints*
- *We need to digitally inspect and validate single and integrated structural components*
- *We need a way to keep track of all our equipment/products in various sites*
- *We need to manage supply flow in our distributed work sites, to enable efficiency*
- *We need to manage logistics and distribution to be more agile*
- *We need to better manage our safety design initiatives, to enhance maintenance collaboration*
- *Distribution flow real time financial cost integration*
- *We need to assure that demand meets supply, and we are not short*

“Digital supply chain: Verity software helps us efficiently move and cost our shipments from one site to another”

With Verity software we can help to digitally optimize supply chain, enabling distributed warehouses to operate efficiently and safely in real time, reducing costs and waste

Digital inspections: energy , flow safety design - we need a way with software to guarantee zero down-time, zero non-productive time, zero points of failure, improving performance of our power infrastructure grid, by routine safety and maintenance inspections

- *Cloud based flex supply chain logistics software*
- *Digital inspection, digital team centric maintenance collaboration*
- *Manage and define inventory, model movement, distribution all in real time*
- *Real time notification of critical supply chain state changes (demand event triggers)*
- *Merchandise input, output cost control*
- *Manage distributed, locations, warehouses and transport*
- *Software tracks flow, movement, financial costs*
- *Industrials: safety design team collaboration*
- *Real time safety inspection runs for industrials assets of any kind*
