#integrity #teamwork #excellence

The point is not just about adopting another new technology, this is really about embracing cultural changes that enhance team collaboration, to improve efficiency, strengthen communication, supporting orderliness, reduce waste, while assuring that supply meets demand. We're motivating, encouraging and inspiring teams to ascend to new levels of excellence and co-operation. Verity software happens to be a tool that helps to make this happen. The focus however is people
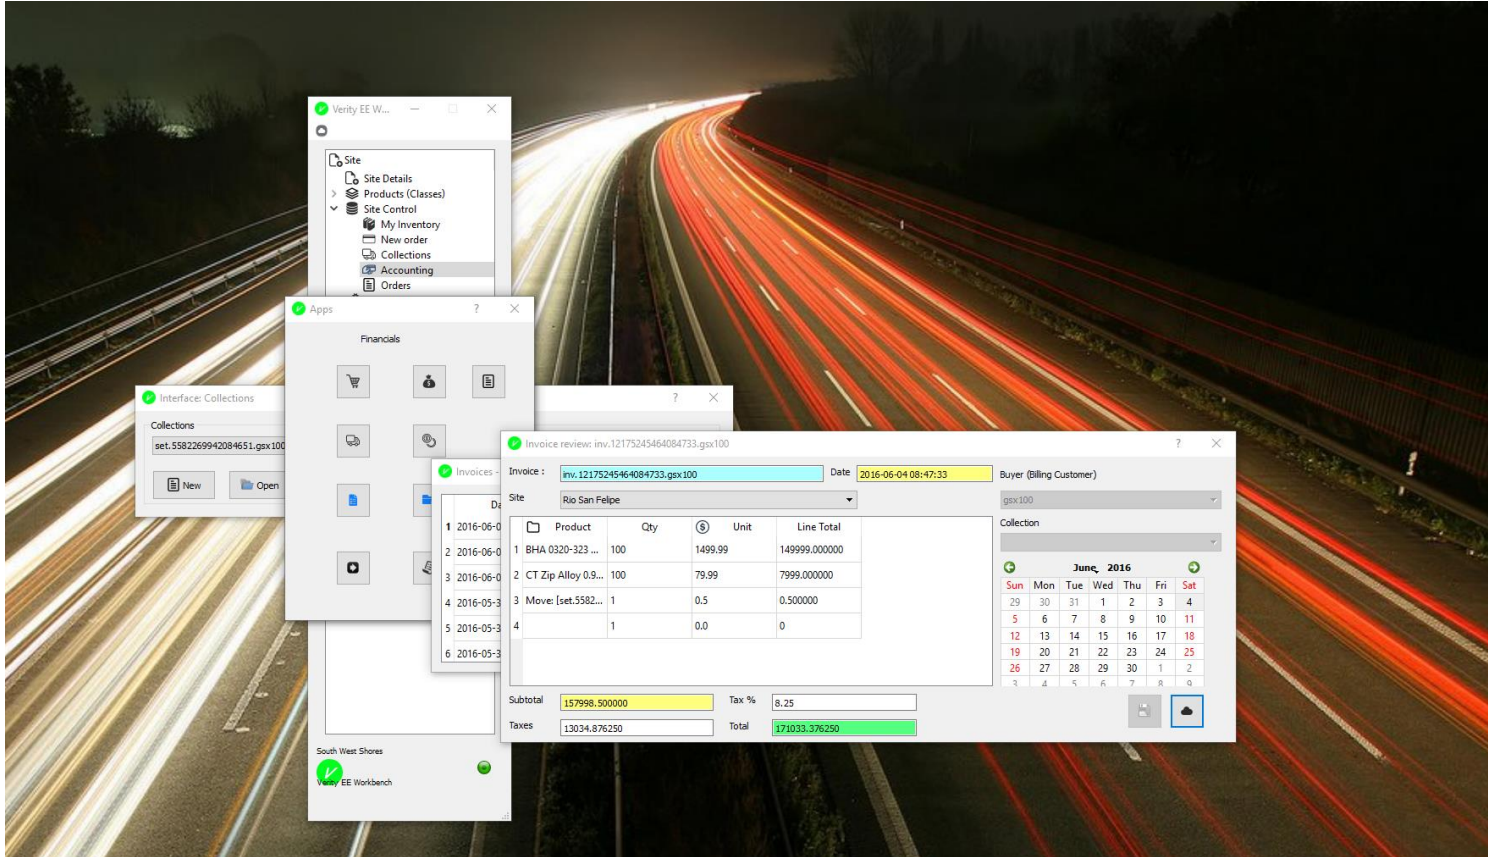

Verity software enables people to do their jobs better, and more efficiently, more safely, collaborating with different parts of the supply chain, from sourcing to distribution to maintenance and inspection of equipment

NOWELL
DEVELOPMENT

Verity EE software helps supply chain move more efficiently, by implementing digital 5S and Six Sigma processes – ordering and organizing for optimal financial performance

Verity software – flex distribution , flex supply chain, safety design

- Define warehouse locations and stock inventory

- Search for products, stock count, per site – similar to online search

- Collaborative, team centric software give operators more visibility

- Move freight from one location to another, and track in software

- Generate financial invoices for freight shipping and warehouse checkout

- Have full visibility into your distribution centers, optimize your transportation and supply distribution

- Develop, run safety design workflows for inspections

- Flex logistics, flex supply chain optimization – via collaboration

- Give your shipping customers a solution that helps them optimize their supply chain and increase your value offering with software

Verity EE software UI is easy to learn, and easy to use

Verity software – flow design, flex safety design development

- *Define safety design flows for industrial equipment*

- *Assure that flow design meets inspection criteria*

- *Maintain details for structures and equipment*

- *Store all inspection runs in real time database for later review and quality control*

- *Execute safety inspection runs for assets, objects and facilities*

- *Sync flex safety design work flows to financials integration to invoice costs of quality runs*
